THROUGHBOLT BOA-X AND BOAX-II

For simple and economical applications.

Function: Application of the installation torque draws the cone end of the stud into the expansion clip. The expansion clip expands and develops a frictional grip with the sidewalls of the hole. This gives the anchor its resistance to tension loads.

Benefits:

- Economical anchor for medium-duty loads
- Approved for use in cracked and non-cracked concrete

BOA-X AND BOAX-II

SIMPSON Strong-Tie

CONSTRUCTION:

BoA-X / BoAX-II with hex nut and washer

MATERIAL:

- Carbon steel, zinc plated and blue passivated
- A4 stainless steel

BASE MATERIAL:

Cracked and non-cracked concrete: C20/25 to C50/60 (B25 to B55) Also suitable for high density natural stones ($\sigma_n \ge 25$ N/mm²)

APPROVALS:

ETA-08/0276 - Option 1: M8-M16, carbon steel, zinc plated ETA-08/0276 - Option 1: M8-M16, A4 stainless steel

LOAD RANGE:

Tension: $N_{perm} = 1.8 - 21.4 \text{ [kN]}$ Shear: $V_{perm} = 1.8 - 22.4 \text{ [kN]}$

PRODUCT RANGE:

BoAX-II: M8 - M16, carbon steel, zinc plated and blue passivated

BoAX-II A4: M8 - M16, A4 stainless steel

BoA-X: M6 + M20, carbon steel, zinc plated and blue passivated

BoA-X A4: M6 + M20, A4 stainless steel

APPLICATIONS:

- Steel construction
- Railing
- Brackets

- Facades
- Cable trays
- Ladders

BENEFITS:

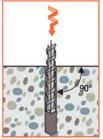

- Economical anchor for medium duty loads
- Less drilling effort: Anchor diameter = Drill bit diameter

PRODUCT DESCRIPTION:

- The throughbolt anchor is installed through the fixture
- Torquing draws the cone end of the stud into the expansion clip. The expansion clip expands and develops a frictional grip with the sidewalls of the hole.

INSTALLATION:

Through-fix installation

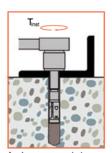

Drill hole

Clean hole (blowing)

Insert anchor through fixture

Apply recommended fastening torque with a calibrated torque-wrench

When many anchors are to be installed, setting tools BoA-ST M6-M10 and BoA-ST M12-M20 are recommended to make the job easier.

■ the professional fastener

Carbon steel, zinc plated

THROUGHBOLT BOA-X AND BOAX-II

Installed anchor

- 1) The permissible loads have been calculated using the partial safety factors for resistances stated in the ETA-approval and a partial safety factor for actions of $\gamma_F = 1.4$. The permissible loads are valid for unreinforced concrete and reinforced concrete with a rebar spacing s \geq 15 cm and reinforced concrete with a rebar spacing s \geq 10 cm if the rebar is 10 mm or smaller.
- 2) The permissible shear loads are based on a single anchor without influencing concrete edges. For shear loads applied close to an edge (c < 10 h_{et} or < 60 d) concrete edge failure must be checked per ETAG 001, Annex C, design method A.
- 3) Concrete is considered non-cracked when the tensile stress within the concrete is $\sigma_{L} + \sigma_{R} \le 0$. In the absence of detailed verification $\sigma_{R} = 3$ N/mm² can be assumed (σ_{L} equals the tensile stress within the concrete as a result of external loads, forces on anchors included).
- 4) If spacings or edge distances become smaller than the characteristic values (i.e. $s \le s_{\alpha,N}$ and/or $c \le c_{\alpha,N}$) a calculation per ETAG 001, Annex C, design method A must be performed. For details, see ETA-08/0276.
- 5) Not included in the approval ETA-08/0276.
- 6) Type BoA-X 16/95 is not included in ETA-08/0276. Permissible loads in C20/25 to C50/60 cracked concrete: N_{perm} = 6.4 [kN]; V_{perm} = 6,4 [kN]. Permissible loads in C20/25 to C50/60 non-cracked concrete: $N_{perm} = 10.0$ [kN]; $V_{perm} = 10.0$ [kN].
